Chapter 1

Introduction

1.1 Purpose

Computes the season based on the solar longitude

1.2 Quickstart

1.2.1 Install

Make sure that Python 3.8 (or later) is available, and install the latest version of `pymarsseason` using pip,

```
$ pip install git+https://github.com/pole-surfaces-planetaires/pymarsseason.git
```

1.2.2 Run it

You can run it as command line:

```
$ pymarsseason -h

usage: pymarsseason [-h] [-v] -t TIME [--level {INFO,DEBUG,WARNING,ERROR,CRITICAL,TRACE}]
Computes the season based on the solar longitude

optional arguments:
-h, --help            show this help message and exit
-v, --version         show program's version number and exit
-t TIME, --time TIME  UTC time (default: 2021-05-24 12:00:00)
--level {INFO,DEBUG,WARNING,ERROR,CRITICAL,TRACE}
                        set Level log (default: INFO)
```

```
$ pymarsseason -t "2022-01-01 00:00:00"

{<Hemisphere.NORTH>: <Season.SUMMER>, <Hemisphere.SOUTH>: <Season.WINTER>, 'ls': 150.
↪64884820217637}
```

You can run using the library :

```
$ from pymarsseason import PyMarsSeason, Hemisphere, Season, Time
$ pyseason = PyMarsSeason()
```

(continues on next page)

(continued from previous page)

```
$ season1 = pyseason.convert_ls_to_season(180)

$ time = Time("2021-01-01", format="iso", scale="utc")
$ season2 = pyseason.compute_season_from_time(time)
```

1.2.3 Develop it

```
$ git clone https://github.com/pole-surfaces-planetaires/pymarsseason.git
$ cd pymarsseason
$ make prepare-dev
$ source .pymarsseason
$ make install-dev
```
